

## Complimentary Technology Events 2012

Wednesday, March 13<sup>th</sup>

9am-11am

**Office365 in combination with SideKick365 addresses the growing organizational challenges that require Dynamic Case Management (DCM).** Ideal for decision makers in all roles, this event will discuss how Office 365 and SideKick365 work together to assist with Dynamic Case Management. What distinguishes case management right now is that it's taking place in an era of people-driven processes (also known as knowledge work –information anytime, anyplace, any device), often involving fewer employees tackling a broader range of work, with many tasks requiring some level of input from multiple people in an organization.

*Limit two registrations per company please*

Wednesday, March 21<sup>st</sup>

1pm-3pm

**EVault and Premier Knowledge Solutions Presents: Striking the Right Balance for Secure Cloud Disaster Recovery & Business Continuity:** Today it seems everyone is using the term cloud. But moving to the cloud can be daunting. For 14 years EVault has been the trusted leader protecting data in the cloud (public and private) providing disaster recovery and business continuity. EVault understands every organization has its unique objectives and circumstances and focuses on helping environments ranging from a single server to enterprise level customers. In aggregate the EVault ecosystem exceeds 67 Petabytes of data. In this live webinar, Matthew Seeley, EVault Systems Engineer will describe what you should look for while determining your cloud strategy for disaster recovery and business continuity
